

ASSIGNMENT-4

| | |
|--------------|------------------|
| Date | 23 October 2022 |
| TeamID | PNT2022TMID49514 |
| Name | M Brindha |
| MaximumMarks | 2Marks |

Question1:

Write code and connections in work for ultrasonic sensor. Whenever distance is less than 100cms send "alert" to ibm cloud and display in device recent events.

CODE:

```
1  #include <WiFi.h> //library for wifi
2  #include <PubSubClient.h> //library for MQTT
3
4
5  void callback(char* subscribetopic, byte* payload, unsigned int payloadLength);
6
7  //-----credentials of IBM Accounts-----
8
9  #define ORG "4hn0jp" //IBM ORGANITION ID
10 #define DEVICE_TYPE "ULTRASON" //Device type mentioned in ibm watson IOT Platform
11 #define DEVICE_ID "DISTANCEDTECT" //Device ID mentioned in ibm watson IOT Platform
12 #define TOKEN "wuo5s7PR)ZSegVk&Rx" //Token
13 String data3;
14 float dist;
15
16
17 //----- Customise the above values -----
18 char server[] = ORG ".messaging.internetofthings.ibmcloud.com"; // Server Name
19 char publishTopic[] = "iot-2/evt/Data/fmt/json"; // topic name and type of event perform and format in which data to be send
20 char subscribetopic[] = "iot-2/cmd/test/fmt/String"; // cmd REPRESENT command type AND COMMAND IS TEST OF FORMAT STRING
21 char authMethod[] = "use-token-auth"; // authentication method
22 char token[] = TOKEN;
23 char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID; //client id
24
25
26 //-----
27 WiFiClient wificlient; // creating the instance for wificlient
28 PubSubClient client(server, 1883, callback, wificlient); //calling the predefined client id by passing parameter like server id, port and wificredential
29
30 int LED = 4;
31 int trig = 5;
32 int echo = 18;
33 void setup()
34 {
35   Serial.begin(115200);
```

OUTPUT:

The screenshot shows the IBM Watson IoT Platform interface. At the top, there are tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. A blue bar contains the device name 'DISTANCEDETECT', its status 'Disconnected', type 'ULTRASON', and a timestamp 'Oct 20, 2022 9:46 AM'. Below this, there are tabs for 'Identity', 'Device Information', 'Recent Events', 'State', and 'Logs'. The 'Recent Events' tab is selected, showing a table of events. The table has columns for 'Event', 'Value', 'Format', and 'Last Received'. There are five rows of data, all with a value of '{\"distance\":141.21,\"object\":\"No\"}' and a format of 'json'. The 'Last Received' column shows 'a few seconds ago' for each row. At the bottom, there is a pagination bar showing 'Items per page 50' and '1-2 of 2 items'.

| Event | Value | Format | Last Received |
|-------|---|--------|-------------------|
| Data | {\"distance\":141.21,\"object\":\"No\"} | json | a few seconds ago |
| Data | {\"distance\":141.21,\"object\":\"No\"} | json | a few seconds ago |
| Data | {\"distance\":141.21,\"object\":\"No\"} | json | a few seconds ago |
| Data | {\"distance\":141.18,\"object\":\"No\"} | json | a few seconds ago |
| Data | {\"distance\":141.2,\"object\":\"No\"} | json | a few seconds ago |

Data send to the IBMcloud device when the objectics far

The screenshot shows the Arduino IDE interface. On the left, the code for the ESP32 is displayed. The code includes headers for WiFi and MQTT, defines constants for the IBM organization ID, device type, device ID, and token, and sets up the MQTT client and WiFi connection. The main loop sends a payload to the MQTT broker every 5 seconds. On the right, there is a simulation of the hardware, showing an ESP32 module connected to an ultrasonic sensor (HC-SR04) and a red LED. The simulation window shows the output of the code, including the message 'no object found' and the payload '{\"distance\":141.21,\"object\":\"No\"}'.

```
